URL encoding the space character: + or %20?

As the aforementioned RFC does not include any reference of encoding spaces as +, I guess using %20 is the way to go today. For example, "%20" is the percent-encoding for the binary

Largest solar thermal power stations (CSP) list

Only the systems with power capacity not less than 50MW are listed. The catalogue

The origin on why "%20" is used as a space in URLs

I am interested in knowing why "%20" is used as a space in URLs, particularly why %20 was used and why we even need it in the first place.

When should space be encoded to plus (+) or %20?

Sometimes the spaces get URL encoded to the + sign, and some other times to %20. What is the difference and why should this happen?

In a URL, should spaces be encoded using %20 or +?

@MetaByter I think it is more technically correct to phrase the question as "In a URL, should I encode the spaces using %20 or + in the query part of a URL?" because while the example you show

US | Concentrating Solar Power Projects | NLR
